

EE 2240
Problem #02

Find V_x using the nodal analysis method.

$$6 \text{ mA} + \frac{V_x}{6 \text{ k}\Omega} + \frac{V_x - V_y}{4 \text{ k}\Omega} - 4 \text{ mA} = 0 \quad (\text{KCL at node } x)$$

$$4 \text{ mA} + \frac{V_y - V_x}{4 \text{ k}\Omega} + \frac{V_y}{5 \text{ k}\Omega} + \frac{V_y}{10 \text{ k}\Omega} = 0 \quad (\text{KCL at node } y)$$

$$\begin{bmatrix} \frac{1}{2400} & -\frac{1}{4000} \\ -\frac{1}{4000} & \frac{11}{20000} \end{bmatrix} \begin{bmatrix} V_x \\ V_y \end{bmatrix} = \begin{bmatrix} -0.002 \\ -0.004 \end{bmatrix}$$

$$V_x = -12.6 \text{ V}$$
